

Science Quiz Review

The seasons of the year are; winter, spring, summer and fall. What is the weather like in each of these seasons?

You can see the sun and sometimes the moon in the daytime sky.

The sun gives off light and heat. The sun is made of hot gasses.

Each day, Earth turns all the way around. This makes the sun seem to move across the sky. In the morning the sun seems low in the sky. At noon the sun seems to be directly above us. By late afternoon it seems to be low again. The sun follows a pattern.

Night always follows day. On many nights you can see the moon in the sky.

The moon is a large ball of rock. The moon does not give off its own light. The moon reflects light from the sun.

The moon seems to change, these changes are called moon phases.

A star is an object in the sky. It gives off its own light. The sun is the star closest to Earth.
